

# How to Create a Tank Mix

**The Tank Mix tab allows you define all the mixes you will use during the year.**

**To create a tank mix:**

1. Click on the "Setup" menu.
2. Click on "Products".
3. Click on the "Tank Mix" tab.
4. Click "New".
5. Type in a "Tank Mix" name, press the tab key on your computer keyboard to populate the display name
6. Type in the "Solution Rate" (this is the rate of the carrier and product per acre, not just the product. i.e. 15 gal/acre).
7. Select a "Carrier" (must already be created on the "Carrier" tab)
8. Type in the "Cost" associated with this mix.
9. Click "Tank Blend" to specify individual ingredients and rates corresponding to this tank mix.
10. In the "Tank Blend" section you must choose the "Category" (Fertilizer or Pesticide), the "Type" (Herbicide, Insecticide, Adjuvant, etc.), the "Name" (must already be created on the appropriate tab), the "Rate", and the "Units/Acre" to be applied.
11. Click "Apply" or "OK" (to return to the main menu of the JDOffice screen.)
