

# AgLogic™ System Requirements Options

The following questions will help to ensure the prospective customer meets the requirements for a successful deal.

## CELLULAR COVERAGE

The AgLogic system requires cellular technology for the transmission of data. At times there may be delays that impact system performance due to cellular coverage. AgLogic PDAs are set-up to store the required data and transmit within 5 minutes after cell coverage is restored. Data Coverage Maps are available at local provider stores to better understand data coverage.

Following are approved cellular/data providers due to PDA constraints:

AT&T  
Sprint  
Verizon

*\* Several local preferred cell providers maintain roaming agreements with the above listed cellular providers.\**

## WEB ACCESS

The following requirements ensure optimal performance of the AgLogic system.

High speed internet access (cable, DSL, satellite, or other)  
Internet Explorer 9.0 or Mozilla Firefox 4.0 and 5.0 Browsers  
Monitor resolution: 1024x768 minimum  
File compression utility – winzip, etc.  
Ability to import/export customer, farm, field, and order data from back office system into AgLogic regularly (see AgLogic Data Translation sheet for options)  
Email for completed order notification

## MOBILE ACCESS

The following requirements ensure field operations can communicate with the AgLogic web application and result in optimal performance of the AgLogic system.

PDA mobile device (see AgLogic PDA Information sheet for options)  
PC with DVD read drive for mobile application installation  
Activated unlimited data communications plan with text messaging for each PDA  
USB Compatible card reader and media required for file transfer [Only required with the purchase of an AgLogic Annual Service—Advanced subscription so that files can be transferred from the PDA to the rate controller]  
*A 12-in-1 or 15-in-1 card reader recommended. Available at most electronics stores.*

## BACK OFFICE AGRONOMY SYSTEM

The following requirements ensure seamless integration with back office agronomy systems to populate the AgLogic System with real time work order information. Please contact the back office supplier directly for information and support with integration.
